The test program verifies:

- Blob storage and retrieval (write, read back, compare)
- Deduplication (same content → same hash → stored once)
- Integrity checking (detects corrupted objects)

Screenshot 1A: Output of ./test_objects showing all tests passing.

```
prajwal@prajwal-VMware-Virtual-Platform:~/os-u4-orange-problem$ make test_objects
./test_objects
make: 'test_objects' is up to date.
Stored blob with hash: d58213f5dbe0629b5c2fa28e5c7d4213ea09227ed0221bbe9db5e5c4b9aafc12

PASS: blob storage
PASS: deduplication
PASS: integrity check

All Phase 1 tests passed.
```

The test program verifies:

- Serialize → parse roundtrip preserves entries, modes, and hashes
- Deterministic serialization (same entries in any order → identical output)

Screenshot 2A: Output of ./test_tree showing all tests passing.

```
prajwal@prajwal-VMware-Virtual-Platform:~/os-u4-orange-problem$ make test_tree
./test_tree
make: 'test_tree' is up to date.
Serialized tree: 139 bytes
PASS: tree serialize/parse roundtrip
PASS: tree deterministic serialization

All Phase 2 tests passed.
```
